Sally Sutton – *Freelance consultant, UK*

Michael Templeton – *Imperial College London, UK*

Belen Torondel – *London School of Hygiene and Tropical Medicine, UK*

Sanjay Wijesekera – *UNICEF, USA*

Published since 1982 *Waterlines* is a peer reviewed journal providing a forum for all those involved in extending water supply, sanitation, hygiene, waste management, and related issues in developing regions, to come together and debate key issues. Successfully bridging the gap between policy and research, *Waterlines* benefits from active readers and authors in the policy, practice, and academic environments, promoting affordable, sustainable solutions.

The editors particularly welcome contributions which consider the key challenges facing the water and sanitation sector (engineers, health professionals, community development workers, researchers, policy makers) and suggest how these issues may be tackled using affordable, sustainable systems with reference to wider policy and institutional frameworks.

Articles should be original contributions, between 4-6000 words in length, formatted to house style and not under consideration elsewhere. Alongside regular issues *Waterlines* also produces special guest edited thematic issues. If you would be interested in submitting to a special issue or would like to submit a proposal further information can be found on the journal homepage www.practicalaction.org/waterlines.

Full instructions for authors, including House Style guide can be found online at
